

I support XM Satellite Radio and find it a valuable form of entertainment, and information on my daily commute to and from work. I have found that by having a direct feed on weather and traffic in the Dallas/Ft Worth metroplex I have been able to save time and avoid trouble spots in most cases. I pay for this service because I enjoy 100% commercial free programming that doesn't leave me listening to 20 mins of commercials and 5 mins of actual music on my drive to work. If broadcasters on FM radio have a problem with commercial free programming, and see it as a threat, then maybe they could change their programming to include music without the bombardment of commercials from their stations? Not to mention the countless TALKING DJ's that insist on having their "Talk Shows" in the morning, If I wanted to listen to someone pulling pranks on the cell phone, or here someone talking for that matter, I would pick up my cell phone and make a phone call myself!! Thank you for your consideration.
